

Dept of Mathematics  
Online examination Nov-2020.  
Semester III- Parer- II- Algebra  
Sample questions

1. Let  $S = \{ (1,0) ( 1,1)\}$  in  $\mathbb{R}^2$  with usual dot product. Consider the following:
  - (i)  $S$  is a linearly independent set.
  - (ii)  $S$  is an orthogonal set
  - (iii)  $S$  is an orthonormal set
    - a) Only (i) is true
    - b) (i) and (ii) are true
    - c) (i), (ii) and (iii) are all true
    - d) None of these
  
2. Let  $V = \text{Mn}(\mathbb{R})$ ,  $T: V \rightarrow V$  be the map defined by  $T(A) = (A+A^T)/2$ , then
  - a)  $T$  is not linear
  - b)  $T$  is not linear
  - c)  $T$  is a linear with  $\dim \ker T =$  space of skew symmetric matrices
  - d) none of above.
  
3. Let  $T: V \rightarrow W$  be a linear transformation and  $\{v_1, v_2, \dots, v_n\}$  be linear independent subset of  $V$  then  $\{T(v_1), T(v_2), \dots, T(v_n)\}$ 
  - a) is always linearly independent
  - b) may not be linearly independent
  - c) is always linearly dependent
  - d) none of these
  
4. The standard basis of  $\mathbb{R}^4$  is
  - a) orthogonal basis but not orthonormal
  - b) not an orthogonal basis
  - c) orthonormal basis
  - d) None of these
  
5. Let  $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$  be the map defined by  $T(x,y) = (x+2y, x-2y)$  Then
  - a)  $T$  is an invertible linear map
  - b)  $T$  is not a linear map
  - c)  $T$  is a linear map but not surjective
  - d)  $T$  is a linear map but not injective.
  
6. Which of the following is true?
  - a) determinant is n-linear but not skew symmetric
  - b) determinant is not n-linear but skew symmetric
  - c) determinant is n-linear and skew symmetric
  - d) determinant is neither n-linear nor skew symmetric
  
7. Let  $A \in M_3(\mathbb{R})$  and  $k \in \mathbb{R}$ . Then  $\det(kA) =$ 
  - a)  $k \det A$
  - b)  $-k \det A$
  - c)  $(3k) \det A$
  - d)  $k^3 \det A$

8. Cramer's rule is used to
- Find solution of homogeneous system of linear equations
  - Find the unique solution of non-homogeneous system of linear equations.
  - Find determinant of the matrix
  - Find inverse of the matrix
9. The set  $S = \{ (1,0,0), (0,1,0), (0,0,1) \}$  in  $\mathbf{R}^3$  is
- orthogonal but not orthonormal,
  - orthonormal
  - not an orthogonal basis
  - none of these.
10. Which of the following is an inner product on  $\mathbf{R}^2$ ?  $x = (x_1, x_2)$  and  $(y_1, y_2)$
- $\langle x, y \rangle = (x_1+x_2)y_1 + (y_1+y_2)x_2$
  - $\langle x, y \rangle = x_1y_1 + x_2y_2$
  - $\langle x, y \rangle = x_1y_1 - x_2y_2$
  - $\langle x, y \rangle = x_1y_2 + x_2y_1$
